# ESB Group

Region: Europe

Country: Ireland

Questionnaire: Electric utilities

Activity Group: Energy utility networks

# ESB Group

Your Company Score	 B	 B-
Activity group average	B	C
Regional average	C	C
Global average	C	C

CDP recognizes that organizations operating in different primary sectors are affected by and manage environmental issues in alternate ways. To capture this sectoral specificity in the calculation of the final score, CDP utilizes a weighting system during the score calculation at Management and Leadership levels.

All scored questions in the questionnaire are allocated to a scoring category for each scored environmental issue area. The weighting of each category reflects its relative importance for the sector in the overall score.
