

## Dublin Dark Fibre

At ESB Telecoms Ltd we offer our partners unique, high-capacity routes through the extensive and continuously expanding Dublin Dark Fibre network.

We are part of Innovation at ESB, so we understand that control is an essential aspect of business communications requirements. As a partner, we deliver the reassurance of ongoing reliability and affordability, as well as a fully monitored service.

We also bring the advantage of ownership. ESB owns and operates the entire Dublin Dark Fibre network, which gives you an additional dimension of control when you partner with ESB Telecoms Ltd.

## The capacity your business needs?

Our high capacity Dark Fibre network is matched for performance by a keen team of account managers. Their depth of experience is yours when you partner with us, along with several other key benefits.

- Solutions carefully designed around your specific and evolving needs
- Ongoing investment to ensure a best-in-class network
- Flexible commercial options
- Proven track record in network building, management and maintenance
- Unrivalled SLAs that work for you

## Dark Fibre means brighter possibilities

Aside from the unique benefits of control that it offers, Dublin Dark Fibre is physically distinct from all other fibre networks. It supports the most up-to-date technologies, up to 100Gb, is fully secured and integrated with third party networks and our own national network, and comprehensively incorporates all data centres.
